

Publication Ethics and Publication Malpractice Statements

This journal "*Review of Economics & Finance*" is a reputed peer-reviewed journal. A published article is a direct reflection of the quality of the work of the authors and the institutions that support them. It is necessary to agree upon standards of expected ethical behaviour for all parties involved in the act of publishing: the author, the editorial board, the peer reviewer, and the publisher. Our ethic statements are based on "Best Practice Guidelines for Journal Editors" in COPE (2011).

1. Duties of the Editorial Board

1.1 Publication Decisions

The editor-in-chief is responsible for deciding which of the articles submitted to the journal after undergoing peer review should be published. The editor may be guided by the policies of the journal's editorial board and constrained by such legal requirements as shall then be in force regarding libel, copyright infringement and plagiarism. The editor may confer with other editors or reviewers in making this decision. However, neither the editors nor the editorial staff have the authority to influence the reviewers who are conducting the blind review of the articles submitted for peer review.

1.2 Fair Play

The editors should evaluate manuscripts for their intellectual contents without regard to none of the race, gender, sexual orientation, religious belief, ethnic origin, citizenship, or political philosophy of the authors.

1.3 Confidentiality

The editors and any editorial staff must not disclose any information about a submitted manuscript to anyone other than the corresponding author, reviewers, potential reviewers, other editorial advisers, and the publisher, as appropriate.

1.4 Disclosure and Conflicts of Interest

Unpublished materials disclosed in a submitted manuscript must not be used by the editors' and/or any of the editorial board members in their own research without the express written consent of the author(s).

2. Duties of the Reviewers

2.1 Contribution to Editorial Decisions

Peer review assists the editor in making editorial decisions and through the editorial communications with the author may also assist the author in improving the paper. Reviewer s comments to the editors are confidential and before passing on to the author will be made anonymous. The names of the reviewers remain strictly confidential, with their identities known only the Editor-In-Chief and Technical Editor.

2.2 Promptness

Any selected referee who feels unqualified to review the research reported in a manuscript or knows that its prompt review will be impossible should notify the managing editor, Editor-in-Chief or Technical Editor, and excuse himself/herself from the review process.

2.3 Confidentiality

Any manuscript received for review must be treated as a confidential document. It must not be shown to or discussed with others except as authorized by the editors.

2.4 Standards of Objectivity

Reviews should be conducted objectively. Personal criticism of the author(s) is inappropriate. Reviewers should express their views clearly with supporting arguments.

2.5 Acknowledgment of Sources

Reviewers should identify relevant published work that has not been cited by the authors. Any statement that an observation, derivation, or argument had been previously reported should be accompanied by the relevant citation. A reviewer should also call to the editors attention any substantial similarity or overlap between the manuscript under consideration and any other published paper of which they have personal knowledge.

2.6 Disclosure and Conflict of Interest

Unpublished materials disclosed in a submitted manuscript must not be used in a reviewer's own research without the express written consent of the author. Privileged information or ideas obtained through peer review must be strictly kept confidential and not used for personal advantage. Reviewers should not consider manuscripts in which they have conflicts of interest resulting from competitive, collaborative, or other relationships or connections with any of the authors, companies, or institutions connected to the papers.

3. Duties of Authors

3.1 Reporting Standards

Authors of reports of original research should present an accurate account of the work performed as well as an objective discussion of its significance. Underlying data should be represented accurately in the paper. A paper should contain sufficient detail and references to permit others to replicate the work. Fraudulent or knowingly inaccurate statements constitute unethical behaviour and are unacceptable.

3.2 Data Access and Retention

Authors may be asked to provide the raw data in connection with a paper for editorial review, and should be prepared to provide public access to such data (consistent with the ALPSP-STM Statement on Data and Databases), if practicable, and should in any event be prepared to retain such data for a reasonable time after publication.

3.3 Originality and Plagiarism

The authors should ensure that they have written entirely original works, and if the authors have used the work and/or words of others that this has been appropriately cited or quoted.

3.4 Multiple, Redundant or Concurrent Publication

An author should not in general publish manuscripts describing essentially the same research in more than one journal or primary publication. Submitting the same manuscript to more than one journal concurrently constitutes unethical publishing behaviour and hence is unacceptable.

3.5 Acknowledgment of Sources

Proper acknowledgment of the work of others must always be given. Authors should cite publications that have been influential in determining the nature of the reported work.

3.6 Authorship of the Paper

Authorship should be limited to those who have made a significant contribution to the conception, design, execution, or interpretation of the reported study. All those who have made significant contributions should be listed as co-authors. Where there are others who have participated in certain substantive aspects of the research project, they should be acknowledged or listed as contributors. The corresponding author should ensure that all appropriate co-authors and no inappropriate co-authors are included on the paper, and that all co-authors have seen and approved the final version of the paper and have agreed to its submission for publication.

3.7 Hazard

If the work involves chemicals, procedures or equipment that have any unusual hazards inherent in their use, the author must clearly identify these in the manuscript.

3.8 Disclosure and Conflict of Interest

All authors should disclose in their manuscript any financial or other substantive conflict of interest that might be construed to influence the results or interpretation of their manuscript. All sources of financial support for the project should be disclosed.

3.9 Fundamental Errors in Published Works

When an author discovers a significant error or inaccuracy in his/her own published work, it is the author's obligation to promptly notify the journal editor or publisher and cooperate with the editor to retract or correct the paper. If the editor or the publisher learns from a third party that a published work contains a significant error, it is the obligation of the author to promptly retract or correct the paper or provide evidence to the editor of the correctness of the original paper.
